

30 thousand Chinese may die from the Sichuan earthquake. 300 million Chinese will die from heart disease and stroke.

On Friday, June 27 at 7 PM hear Mr. Wei Li, student director of UCI earthquake relief fund, and Dr. Yi Li, director of cardiology at Yunnan Red Cross Hospital tell us what we can do.

Dear friends and colleagues,

Take this opportunity to see the China you will not see if you attend the 2008 Beijing Olympic games and to learn about a cardiovascular disease epidemic which is overwhelming and terrifying in its scope. The rural areas of Yunnan province China contain a population which is one of the poorest on earth and which suffers from a 35% prevalence of untreated

hypertension.

My friends and colleagues in Yunnan, Beijing and Los Angeles have begun to train Yunnan village doctors to measure and treat high blood pressure. We run research studies to establish the frequency

of high blood pressure related heart disease. Learn what we are doing on June 27(Fri) at 7 PM at the May Garden Restaurant at 1400 Bristol Street, Costa Mesa. RSVP to Klara Detrano at **949-737-1637** or email Klara@chinacal.org. See map for location. Requested Donation: \$100.

By attending our dinner event, you will also gain an opportunity to own handmade Yunnan artistic objects like those shown below. Don't miss this opportunity to learn, to relax and to help a worthy cause. All proceeds will be spent towards helping the rural people of Yunnan. Dinner price and any donations or purchases are 100% tax deductible.
